Crawford North serves the greater Dubuque, IA, market with welded fabrication and HVAC services. The primary focus of our fabricators and field crews are to provide solutions for our customer's unique applications, from design phase to delivery. Our craftsmen specialize in working with a wide array of materials to suit your needs.

HVAC & SERVICE

Crawford built its foundation as a company through heating, ventilation, and air conditioning projects. In the 1950's through early 1970's, many of these projects were residential. In the mid 1970's to present day the company has expanded HVAC operations into commercial and industrial endeavors. A large percentage of Crawford's volume is associated with HVAC jobs. Five estimators begin the HVAC process by gaining jobs for the company. These individuals plan and build to carry these projects through completion. The estimators join forces with shop and field employees to see jobs through completion, giving the company a total team effort.

Crawford's Service Division has a long standing tradition of providing effective and efficient work on all makes and models of HVAC equipment. Crawford has only the best technicians and performs work in residential and commercial markets.

Crawford provides routine clean and checks, in depth analysis and repair, and after hour emergency service. Crawford also offers full service for its' plumbing division.

WELDING, LASER CUTTING & FABRICATION

Crawford's Specialty Welded Fabrication Division has played an integral role in the corporate structure since 1985. The majority of this work has been implemented by Crawford's team of specialty welders. Crawford works in many industries and environments. Many of these projects are of stainless steel fabrication for a number of material handling, control panels, work stands, and many other support products for the manufacturing process. The primary focus of our fabricator is to provide solutions for our customer's unique applications, from design phase to delivery. Our craftsmen specialize in working with a wide array of materials to suit your needs. In the manufacturing field, we routinely fabricate prototypes, produce parts, and build sub-assemblies. Our capabilities include a full range of fabrication applications on materials up to 3/4" plate. Heavier materials are available through outsource services.

Other regularly performed services for customers include prototype fabrication, parts production, and sub-assemblies for manufactured products. The company also welcomes other varied requests related to this field. The Specialty Welded Fabrication Division may be summarized in four general categories: Food Processing Projects, Environmental Control, Ventilation Systems, and Special Projects. This division also works closely with Crawford's Custom Architectural Products.

Crawford's Laser Cutting Division provides customers with precision cuts for mild steel, stainless steel, tool steel, aluminum, and plastics. Crawford offers four versatile machines to meet a variety of demands. The largest bed size, for the lasers, are dual 78" wide x 157" long pallets.

The Laser Division, complements Crawford's long-standing tradition of excellence in specialty fabrication. Crawford presents complete services in reference to laser cutting, CNC

punching, metal forming, and welding. The division offers competitive pricing and one of the most experienced teams in the region.
